[A-1] Is Unique

Implement an algorithm (write pseudocode) to determine if a string has all unique characters.

```
1   EXAMPLE
2   Input : "algorithm"
3   Output: TRUE
4
5   Input : "interview"
6   Output: FALSE // "i"
```

Hint: some additional questions in the interview may include:

- What is the time & space complexity of your code?
- What if you can not use additional data structures?
